A MUSEUM featuring China’s reform and opening up at Sea World in Shekou will open to the public Tuesday.

A smart medicine dispenser museum on the theme of reform and opening up, the museum will exhibit many historical documents and use high-tech and virtual reality technologies to represent historical moments, and lead visitors through the memorable years in Shekou during the early stage of China’s reform and opening up.

The museum restores the original scene of Deng Xiaoping’s first inspection tour in the south in 1984 and historic moments of State leaders bearing reports from Yuan Geng, the founder of the Shekou Industrial Zone and a reform trailblazer, about the development of the Shekou Industrial Zone.

The ground-breaking blast in Shekou in July 1979, which burrowed the first hole of the GDP, is also an important moment in the history of Shekou.

The museum also created a life-sized model of the command office that was set up inside a container.

The museum reflects on the actual situation in Shekou during the 1980s and 1990s, the fast development of Shekou, as the cradle of the country’s industrial boom and the test tube for changes, through the exhibition of photos, objects, documents and letters. The items of ordinary workers that are on display, including their working cards, certificates, photos and trophies, represent this pioneering period.

Led by the Shenzhen Institute of Information Technology (SZIIT), a nongovernment alliance consisting of vocational education institutions and enterprises in the Guangdong-Hong Kong-Macao Greater Bay Area, was officially inaugurated at SZIIT's campus in Longgang District yesterday afternoon.

The voluntary alliance, known as the Guangdong-Hong Kong-Macao Greater Bay Area Industry-College Alliance for Vocational Education, was set up in response to the country’s strategic plan that advocates broader and more in-depth cooperation among mainland cities, especially Guangdong cities, Hong Kong and Macao.

“Setting up such an alliance for vocational education is to gather and share educational resources as well as to build platforms to help vocational education institutions cooperate with enterprises in terms of teaching, learning, research and application,” said Sun Yong, president of SZIIT, who also was nominated as the first chairman of the alliance.

“Profound among the alliance’s members, it can be seen that most of the vocational education institutions in Guangdong Province have been included. Some renowned enterprises, such as Huawei Technologies, are also joining the alliance,” Sun said.

Cooperation among the members is strongly encouraged under the principles of the alliance. According to Sun, the alliance will actively explore methods to enhance communication and coordination among the alliance members. Projects including organizations beyond the alliance will also be advocated, said Sun. Cultivating and recruiting talents for the Guangdong-Hong Kong-Macao Greater Bay Area is believed to be one of the most important aspects in making the area a world-class economic hub, said Tang Jie, the former deputy mayor of Shenzhen and now an economics professor at Harbin Institute of Technology, Shenzhen.

Tang was invited to deliver a keynote speech at the inauguration ceremony yesterday. In his speech, Tang highlighted the significance of building up effective mechanisms for cultivating talents with all possible and multilateral resources from major cities in Guangdong, Hong Kong and Macao.

The economics professor used the other three world-renowned bay areas, namely the Tokyo Bay Area, San Francisco Bay Area and New York Bay Area, as examples to point out the importance of cooperation and sharing resources.

“Not all cities should aim to become international metropoles in the bay area, because some smaller cities can find their edge in different aspects and cooperation among the bay area is crucial,” said Tang.

FOR those who have elders in the family, it is worrying about whether they sometimes forget to take their medicines on time. Zeng Jingqiang, the founder and CEO of Shenzhen People Strong Co., Ltd., has provided a clever yet considerate solution.

“Many elders have strokes, and so sometimes they forget to take their medicines on time. Zeng Jingqiang, whom I have known for 10 years, has invented a smart medicine dispenser system for testing balance,” said Sun Yuchen, the former deputy mayor of Shenzhen and now an economics professor at Harbin Institute of Technology, Shenzhen.
